SAFETY INFORMATION

WARNING!

Read the safety precautions in this section before installing, powering, operating or servicing this product

The following symbols are used to identify important safety information on the product and in this manual:

DANGER!
Safety hazard.
Risk of severe injury or death.

DANGER!
Hazardous voltage. Risk of lethal or severe electric shock.

WARNING!
Fire hazard.

WARNING!
LED light emission. Risk of eye injury.

WARNING!
Burn hazard. Hot surface. Do not touch.

WARNING!
Wear protective eyewear.

WARNING!
Refer to user manual.

Warning! Risk Group 3 (high risk) LED product according to EN 62471. Do not look into the beam at a distance of less than 3 meters from the front surface of the product. Do not view the light output with optical instruments or any device that may concentrate the beam.

This product is for professional use only. It is not for household use.

This product presents risks of severe injury or death due to fire and burn hazards, electric shock and falls.

Read this manual before installing, powering or servicing the fixture, follow the safety precautions listed below and observe all warnings in this manual and printed on the fixture. If you have questions about how to operate the fixture safely, please contact your supplier.

PROTECTION FROM ELECTRIC SHOCK

- Disconnect the fixture from AC power before removing or installing any cover or part and when not in use.
- Always ground (earth) the fixture electrically.
- Use only a source of AC power that complies with local building and electrical codes and has both overload and ground-fault (earth-fault) protection.
- Before using the fixture, check that all power distribution equipment and cables are in perfect condition and rated for the current requirements of all connected devices.
- Power input and through out cables must be rated 20A minimum, have three conductors 1.5 mm² (16 AWG) minimum conductor size and an outer cable diameter of 5 - 15 mm . Cables must be hard usage type (SJT or equivalent) and heat-resistant to 90° C minimum.
- Use only PowerCON TRUE 1[®] cable connectors to connect to power input sockets. Use only PowerCON TRUE 1[®] cable connectors to connect to power through put sockets.
- Isolate the fixture from power immediately if the power plug or any seal, cover, cable, or other component is damaged, defective, deformed, wet or showing signs of overheating. Do not reapply power until repairs have been completed.

DO NOT EXPOSE THE FIXTURE TO RAIN OR MOISTURE

- Refer any service operation not described in this manual to a qualified technician.
- Socket outlets used to supply the fixture with power or external power switches must be located near the fixtures and easily accessible so that the fixtures can easily be disconnected from power.

PROTECTION FROM BURNS AND FIRE

- Do not operate the fixture if the ambient temperature (T_a) exceeds 40°C.
- The exterior of the fixture becomes hot during use. Avoid contact by persons and materials. Allow the fixture to cool for at least 10 minutes before handling.
- Keep all combustible materials (e.g. fabric, wood, paper) at least 100 mm away from the fixture.
- Keep flammable materials well away from the fixture.
- Ensure that there is free and unobstructed airflow around the fixture.
- Do not illuminate surfaces within 200 mm of the fixture.
- Do not attempt to bypass thermostatic switches or fuses.
- If you relay power from one fixture to another using power throughput sockets, do not connect more than ten the fixture in total to each other in an interconnected chain.
- Connect only other the fixture to fixture power throughput sockets. Do not connect any other type of device to these sockets.
- Do not connect any other type of device to these sockets.
- Do not stick filters, masks or other materials onto any optical component.
- Do not modify the fixture in any way not described in this manual
- Do not use fixture on a dimmer

PROTECTION FROM INJURY

- Do not look continuously at LEDs from a distance of less than 3 meters from the front surface of the fixture without protective eyewear such as shade 4-5 welding goggles. At less than this distance, the LED emission can cause eye injury or irritation. At distances of 3 meters and above, light output is harmless to the naked eye provided that the eye's natural aversion response is not overcome.
- Do not look at LEDs with magnifiers, telescopes, binoculars or similar optical instruments that may concentrate the light output.
- Ensure that persons are not looking at the LEDs from within 3 meters when the product lights up suddenly. This can happen when power is applied, when the product receives a DMX signal, or when SERVICE menu items are selected.
- Fasten the fixture securely to a fixed surface or structure when in use. The fixture is not portable when installed.
- Ensure that any supporting structure and/or hardware used can hold at least 10 times the weight of all the devices they support.
- Allow enough clearance around the fixture to ensure that it cannot collide with an object or another fixture when it moves.
- Check that all external covers and rigging hardware are securely fastened.
- Block access below the work area and work from a stable platform whenever installing, servicing or moving the fixture.
- Do not operate the fixture with missing or damaged covers, shields or any optical component.

FIXTURE OVERVIEW

INTRODUCTION

OUTDOOR RGBW LED FIXTURE

AFFORDABLE LIGHTING ESSENTIAL

- Superior Color mixing via unique lens design
- Onboard control panel and backlit LCD graphic display
- Electronic shutter with strobe and pulse effects
- Calibrated and raw modes
- Each line can be controlled independently
- Refresh frequency 600/1200/2400/4800 adjustable
- Wireless DMX multimode(2.4GHz) by Wireless Solution Sweden
- Smooth RGBW color mixing
- Ip65 rating
- Silent operation
- Smooth projection
- Powercon true 1[®] in & out
- RDM ready

USING FOR THE FIRST TIME

Warning! Read “Safety Information” on page 2 before installing, powering, operating or servicing the fixture. Before applying power to the fixture:

- Check that the local AC mains power source is within the fixture's power voltage and frequency ranges.
- See “Power cables and power plug” on page 6. Install a PowerCON TRUE 1[®] power input connector on a suitable power cable.

AC POWER

Warning! Read “Safety Information” starting on page 2 before connecting the fixtures to AC mains power.

Warning! For protection from electric shock, the fixture must be grounded (earthed). The power distribution circuit must be equipped with a fuse or circuit breaker and ground-fault (earth-fault) protection.

Warning! Socket outlets or external power switches used to supply the fixture with power must be located near the fixture and easily accessible so that the fixtures can easily be disconnected from power.

Important! Do not insert or remove live PowerCON TRUE 1[®] connectors to apply or cut power, as this may cause arcing at the terminals that will damage the connectors.

Important! Do not use an external dimming system to supply power to the fixture, as this may cause damage to the fixture that is not covered by the product warranty.

The fixture can be hard-wired to a electrical installation if you want to install it permanently, or a power plug that is suitable for the local power outlets can be installed on the power cable.

POWER VOLTAGE

Warning! Check that the voltage range specified on the fixtures serial number label matches the local AC mains power voltage before applying power to the fixture.

The fixtures accepts AC mains power at 100-240 V nominal, 50/60 Hz. Do not apply AC mains power to the fixture at any other voltage than specified.

POWER CABLES

Power input and throughput cables must be rated 20A minimum, have three conductors 1.5 mm² (16 AWG) minimum conductor size and an outer cable diameter of 5 - 15 mm. Cables must be hard usage type (SJT or equivalent) and heat- resistant to 90°C minimum. In the EU the cable must be HAR approved or equivalent.

If you install a power plug on the power cable, install a grounding-type (earthed) plug that is rated 20A minimum. Follow the plug manufacturer's instructions. Table 1 shows standard wire color-coding schemes and some possible pin identification schemes; if pins are not clearly identified.

Wire Color (EU models)	Wire Color (US models)	Conductor	Symbol	Screw (US)
Brown	Black	Live	L	Yellow or Brass
Blue	White	Neutral	N	Silver
Yellow/Green	Green	Ground (earth)	 or 	Green

Table 1 : Wire color-coding and power connections

RELAYING POWER TO OTHER DEVICES

Warning! Do not connect more than ten fixtures in total to AC mains power in one interconnected chain. Power can be relayed to another device via the PowerCON TRUE 1[®] throughput socket.

If you daisy chain the fixtures in a chain so that they all draw AC mains power via the first fixture, certain points must be respected:

- A heavy duty, three-conductor, 16 AWG or 1.5 mm² cable with SJT or equivalent cable jacket must be used to connect the first fixture to AC mains power.
- PowerCON TRUE 1[®] connectors must be used to draw AC mains power from the fixtures power throughput sockets and yellow PowerCON TRUE 1[®] connectors must be used to supply power at the fixture's power input sockets.
- No matter what the AC mains power voltage is, do not connect more than ten the fixture in total (i.e. including the first fixture) to AC mains power in one interconnected daisy chain using power input and through out connectors.

DATA LINK

A DMX 512 data link is required in order to control a fixture via DMX. The fixture has 5-pin XLR connectors for DMX data input and output. The pin-out on all connectors is pin 1 = shield, pin 2 = cold (-), and pin 3 = hot (+) Pins 4 and 5 in the 5-pin XLR connectors are not used.

TIPS FOR RELIABLE DATA TRANSMISSION

To connect the fixture to data:

1. Connect the DMX data output from the controller to 5-pin XLR connector of the nearest fixture.
2. Connect the DMX output of the fixture closest to the controller to the DMX input of the next fixture and continue connecting fixtures output to input.

PHYSICAL INSTALLATION

Warning! The fixture must be either fastened to a flat surface such as a stage or wall, or clamped to a truss or similar structure in any orientation using a rigging clamp.

Warning! If the fixture can cause injury or damage if it falls, attach an approved safety cable to one of the safety cable attachment points on the base (see "Fixture overview" on page 4).

Check that all surfaces to be illuminated are minimum 200 mm. from the fixture, that combustible materials (wood, fabric, paper, etc.) are minimum 100 mm. from the fixture, that there is free airflow around the fixture and that there are no flammable materials nearby.

FASTENING THE FIXTURE TO A FLAT SURFACE

The fixture can be fastened to a fixed flat surface that is oriented at any angle. Check that the surface can support at least 10 times the weight of all fixtures and equipment to be installed on it.

Warning! The supporting surface must be hard and flat or air vents in the base may be blocked, which will cause overheating. Fasten the fixture securely. Do not stand it on a surface or leave it where it can be moved or can fall over. Attach a securely anchored safety cable to the safety cable attachment point (see "Fixture overview" on page 4) if the fixture is to be installed in any location where it may fall and cause injury or damage if the primary attachment fails.

1. Block access under the work area. Working from a stable platform, hang the fixture on the truss with the arrow on the base towards the area to be illuminated. Tighten the rigging clamp.
2. Secure the fixture against clamp failure with a secondary attachment such as an approved safety cable that is rated for the weight of the fixture using one of the attachment points at the edges of the base (see "Fixture overview" on page 4). Do not use any other part of the fixture as a safety cable attachment point.

SETUP

Warning! Read "Safety Information" on page 2 before installing, powering, operating the fixture.

CONTROL PANEL AND MENU NAVIGATION

The onboard control panel and backlit graphic display are used to set the fixture's DMX address, configure individual fixture settings (personality), read out data and execute service utilities. See "Onboard control menus" on page 23 for a complete list of menus and commands.

Using the control buttons

- To enter the menu select [MODE].
- Press [UP] and [DOWN] to scroll within a menu or adjust values.
- To enter a menu, select a function or apply a selection, press [ENTER].
- To escape a function or move back one level in the menu structure, press [MODE].
- Holding down the "UP" and "DOWN" button for more than 3 seconds, the MENU display will rotate 180°.

DMX ADDRESS SETTING

The DMX address, also known as the start channel, is the first channel used to receive instructions from the controller. For independent control, each fixture must be assigned to a separate channel.

The DMX address can be configured by using the DMX ADDRESS menu in the control panel. For setting the DMX address press [ENTER] before you can change the address.

- In order to check if there is a DMX signal present on the fixture you can easily see that via the big 'DOT' on the main screen and also when the backlight function is switched to off.
- The fixture is fully RDM ready. So when you are using a RDM ready console you can address the unit and read out its complete status. For RDM functions please refer to the ANSI/ESTA E1.20-2006 standard

WDMX CONTROL

Press the button "UP" to switch off Wireless DMX or disconnect with all connected Transmitters.

Press the button "DOWN" to set the unit in the "ready to connect with all not connected transmitters" mode. If you press the mode button on the Wireless solution transmitter all the units in this mode will be connected.

If the unit is successfully connected in the home display the sign "▲ : V ". Appears. If the unit is not connected to a transmitter in the home display the sign "▲ : X ". If the unit is switched off in the home display the sign "▲ : OFF ".

- Holding the **MENU** and **ENTER** button for more than 3 seconds, The Wireless Board will reset.
- Do not use Wireless DMX and Wired DMX at the same time because it will give unwanted interference

CONTROL MODE

DMX control mode is selected in the CONTROL MODE menu. The fixture has 7 DMX control modes:

	4ch	9ch	11ch	12ch	17ch	23ch	24ch
RGBW	✓	✓	✓			✓	
Strobe		✓	✓		✓	✓	✓
Dimmer		✓	✓		✓	✓	✓
Function set		✓	✓		✓	✓	✓
Macro color		✓	✓			✓	✓
CCT		✓	✓			✓	
LED block (Dimmer)							✓
LED block (RGBW)				✓	✓	✓	✓
LEDblock (Dimmerspeed)							✓
Effect			✓		✓	✓	✓
Dimmer /Effect speed			✓		✓	✓	✓

STATIC COLOR OPTIONS

There are three options for Static color:

1 NO CALIBRATION

Color calibration mode is off.

2 MANUAL

Manual calibration mode, RGBW to white is according your custom calibration.

Manual calibration can be calibrated by the control panel and DMX channel.

calibrate by control panel

1、 Press MODE button until 【MANUAL】 is displayed, press ENTER

2、 Enter the password

3、 Set 【Red,Green,Blue】 to white by custom calibration

calibrate by DMX channel

channel 3 is set to 245-249 to enter dmx controller calibration

channel	Function	Value	Setting
1	No function	000 - 255	
2	No function	000 - 255	
3	No function	000 - 255	
4	calibrate by DMX channel	000 - 229 230 - 234 240 - 244 245 - 249 250 - 255	No function come back to DMX mode No function turn on manual calibration mode by dmx control Illuminate display Value must be held for 3 seconds to activate.
5	Save Correction	000 - 254 255	No function Save Correction, Value must be held for 3 seconds to activate.
6	Red	000 - 255	0 - 100%
7	Green	000 - 255	0 - 100%
8	Blue	000 - 255	0 - 100%
9	White	000 - 255	0 - 100%

3 FACTORY CALIBRATION MODE

Fixture is calibrated in the factory by radiant machine.

AUTO SHOW

The auto function gives 20 Automatically RGBW color combinations which are working without any DMX console. Hit [ENTER] to adjust the speed of the program from 1-20

1) Auto 1	6) Auto 6	11) Auto 11	16) Auto 16
2) Auto 2	7) Auto 7	12) Auto 12	17) Auto 17
3) Auto 3	8) Auto 8	13) Auto 13	18) Auto 18
4) Auto 4	9) Auto 9	14) Auto 14	19) Auto 19
5) Auto 5	10) Auto 10	15) Auto 15	20) Auto 1-19 cycle

MASTER/SLAVE

You can choose between Master or slave functioning. The chosen mode is visible in the homescreen. The fixture will automatically go to slave function when no DMX signal is offered.

PERSONALITY

Here you can set all functions for the fixture.

FANS	Cooling fan speed regulated three level of silent mode to control the output Max. cooling fan speed
Led power	Normal (High output mode) Theater (Gentle output mode)
Dimmer Speed	Normal (normal dimming speed) Smooth (slowest dimming speed)
KEY-Lock	Locks all the button functions. Standard unlocking password is (MODE+UP+MODE+DOWN+MODE+UP+MODE+DOWN+ENTER)
W-DMX	ON (Turn on the Wireless Board) OFF (Turn off the Wireless Board) RESET (Reset the Wireless Board)
CALIBRATION	NO CALIBRATION = Color calibration mode off. MANUAL = Manual calibration mode, RGBW to white is custom calibration FACTORY = Factory calibration mode, RGBW to white is factory calibration
Refresh rate	Controls the Flicker frequency of the fixture 600 1200 2400 4800
LCD brightness	Set the LCD display brightness(1-10)
DMX HOLD	DMX HOLD=The fixture will stay on last values when you disconnect DMX NO DMX HOLD=The fixture has no output when you disconnect DMX

INFORMATION

Software type	Shows software version (Vx.x)
Usage time	USE of time and Use time reset (password)
Temperature	LED board current temperature
UID	Shows the unique ID for the RDM protocol. <0x02E20002xxxx>

FACTORY RESET

Resets the fixture to its factory default settings.
Please reboot power before reset takes effect.

Weight	8.7 kg without accessories
Dynamic Effects	
beam angle	21°
Optics	
Light source	18 pcs high-power LEDs (RGBW)
Control and Programming	
Control	DMX
DMX channels	04 / 09 / 11 / 12 / 17 / 23 / 24
Setting and addressing	Control panel with backlit LCD graphic display
Protocol	RDM, USITT DMX512-A
Control and Programming	
Color	Black
Housing	High strength die-casting aluminum
Protection rating	IP 65 (If rubbers covers are place correctly when connectors are not used)
Installation	
Orientation	Any
Minimum distance to combustible materials	100 mm. from fixture
Minimum distance to illuminated surfaces	200 mm. from fixture
Connections	
AC power input	PowerCON TRUE 1® input socket
AC power throughput	PowerCON TRUE 1® output socket
DMX data in/out	5 pin locking XLR (3 pin optional with #CLF-13-453 & CLF-13-454)
Electrical	
AC power	100-240 V nominal, 50/60 Hz
Maximum total power consumption	300 W
Power supply unit	Auto-ranging electronic switch mode
Power consumption, all effects static, zero light output	<15 W
Power consumption	
120 V, 60 Hz	300 W, PF 0.991
240 V, 50 Hz	300 W, PF 0.953
PF = power factor. Measurements made at nominal voltage with all LEDs at full intensity. Allow for a deviation of +/- 10%. Thermal	
Cooling	
Forced air (temperature-regulated, low noise, user-defnable levels)	
Maximum ambient temperature (Ta max.)	40° C
Minimum ambient temperature (Ta min.)	5°
Total heat dissipation (calculated, +/- 10%)	820 BTU/hr.

ARES XS
